

Ordering donor sperm from the sperm bank Skejby CryoBank

When you want to use donor sperm for the treatment, you must order the sperm from the sperm bank yourself.

This guide describes ordering sperm from the Danish sperm bank Skejby CryoBank.

Skejby CryoBank is owned by the same group as Trianglen Fertility Clinic; Virtus Health

This means that you do not pay the shipping and handling fee for sperm straw received from Skejby Cryobank. See more below.

What types of sperm donors are there?

There are two different types of sperm donors. Donor can be *open* or *closed*.

If you choose an open donor, the child can have the donor's identity revealed when the child turns 18.

If you choose a closed donor, the child will not be able to have the donor's identity revealed.

All donor profiles have the following information; height, weight, eye color, hair color and ethnicity. Some donors have attached a baby picture and / or a short description of themselves.

What type of straw?

Sperm straw from Skejby CryoBank is MOT 10 or MOT 20 or better, and meets Trianglen's recommendations in terms of quality.

The number says something about the number of motile sperm in the straw:

- MOT 10 straws contain DKK 10 million. progressively motile sperm per ml.
- MOT 20 straws contain 20 mill. progressively motile sperm per ml.

What type of straw should I choose?

As a general rule, we recommend that you choose MOT 10 straw for IVF and ICSI treatment, and MOT 20 straw for insemination treatment (IUI-D). The sperm is already "cleansed" from Skejby CryoBank, so our laboratory should not do that.

How many straws?

We recommend that you order 1-2 sperm straws.

At Trianglen, we can store the straws for up to one year free of charge. Longer storage is paid according to our price list

Once pregnancy has been achieved with a given donor, it may be considered whether to reserve more straws in the sperm bank for possible future use. This is done by contacting Skejby CryoBank.

When should the sperm straws be ordered?

Order the sperm straws well in advance - preferably so that it arrives no later than one week before the planned treatment.

Ordering for Trianglen's patients

Trianglen Fertility Clinic has a collaboration agreement with Skejby CryoBank, which, like Trianglen, is part of Virtus Health. This means that you get free delivery and save our handling fee when you order sperm from Skejby CryoBank

Donor quota in Denmark?

Sperm donors must, as a maximum, be the origin of children in 12 families in Denmark. Skejby CryoBank has will keep track of this.

Shipping

Skejby CryoBank always sends sperm straws in a dry-shipper, which ensures optimal conditions and temperature during the entire shipment.
